Required Companion Products

Description	Order Code
ChargePoint Cloud Plan	Please contact ChargePoint sales
ChargePoint Gateway* (1 required for every 9 stations)	CPGW1-LTE

* The ChargePoint Gateway is required for all CPF50 installations. ChargePoint certified installers will do a site validation and order the ChargePoint Gateway as needed. In addition, the site host is responsible for providing power to the gateway. The ChargePoint Gateway is owned and maintained by ChargePoint.

The Gateway should be located where cellular signal levels are optimal for LTE. Each Gateway must be located within 150 feet line-of-sight to as many as nine (9) CPF50 charging stations. Each CPF50 charging station has built-in WiFi capability to communicate via the Gateway for ChargePoint network services.

The Gateway is a UL Class 2 device and requires less than four watts power (33 mA@120 V or 19 mA@208 V). ChargePoint recommends hardwire electrical termination to the power source for the Gateway. The Gateway dimensions are 280 mm (11 in) wide by 340 mm (13 3/8 in) long by 137 mm (5 3/8 in) deep.

General Specifications

Electrical Input

CPF50 supports flexible current settings up to 50A to fit your needs.

Power Select allows CPF50 stations to be installed and software-configured for current input/output lower than the maximum 50A rating depending on your electrical and charging requirements. CPF50 Power Select current input/output options include 16A, 24A, 32A, 40A, and 48A.

Power Share allows two stations to share power from a single circuit dynamically across the stations, adjusting each station's power output depending on whether one or both are actively charging. Standard wiring uses an independent circuit for each station. Power Share can be used in combination with Power Select.
